PROFESSIONAL SUMMARY

Cybersecurity graduate with hands-on experience in Linux, CI/CD, Docker, Kubernetes, application deployment, infrastructure troubleshooting, and security testing. Built and supported end-to-end systems across clinical, DevOps, and cybersecurity environments, with practical ownership from configuration and integration through deployment and operational support. Targeting junior DevOps, application support, IT operations, infrastructure, platform support, or DevSecOps roles.

CORE TECHNICAL SKILLS

DevOps & Containers: Linux administration (Ubuntu/Oracle Linux), Git/GitHub/GitLab, Jenkins CI/CD, Docker/Docker Compose, Dockerfiles, multi-stage builds, container networking/volumes, Kubernetes (Deployments, Services, ConfigMaps, Secrets, Ingress, Namespaces, persistent storage), Terraform, Bash/YAML, VMs
Middleware & Operations: Apache Tomcat multi-instance deployment, NGINX reverse proxy/load balancing, JDK 8/11, systemd/services, SSH, server/environment configuration, application deployment, production support, log analysis, incident troubleshooting, root-cause analysis
Databases & APIs: Oracle Database 19c (CDB/PDB, Listener, Tablespace, users, DB Links, EM Express), MySQL, SQL, REST APIs, Postman, JSON, HTTP/HTTPS
Security, Networking & Monitoring: Trivy, SonarQube, Burp Suite, Nmap, Nessus, OWASP ZAP, SQLMap, Nikto, Metasploit, Wireshark, CVSS, ISO 27001, Grafana fundamentals; TCP/IP, DNS, subnetting, VLANs, routing/switching, OSPF, RIP
Languages: Arabic (Native), English (Professional working proficiency)

EXPERIENCE

Application Engineer & Deployment Support | Family Medicine Clinic - Abdali Hospital Dec 2025 - Apr 2026

- Independently designed a production-ready clinical documentation application for a family medicine department of approximately 10 doctors, automating patient-history capture and bilingual report preparation.
- Built the system with Next.js, React, TypeScript, and Node.js APIs; integrated AI speech transcription and structured extraction for mixed Arabic-English consultations, including histories, findings, medications, dosages, and follow-up plans.
- Developed clinician-review features that highlighted provisional insights, red flags, missing information, and medication-safety considerations before approved content was added to the final report.
- Implemented asynchronous processing, REST APIs, structured JSON validation, audit logging, local data persistence, print-ready Arabic/English reports, Git/GitHub workflows, deployment automation, and application/server troubleshooting.

DevOps Trainee | Digitinary Mar 2025 - Apr 2025

- Containerized multiple microservices using Dockerfiles written from scratch, multi-stage builds, and Docker Compose to manage interconnected services.
- Built a Jenkins CI/CD pipeline from scratch with automated build, test, Trivy image/filesystem/dependency scanning, and deployment stages.
- Configured a local Kubernetes environment across Ubuntu virtual machines using Deployments, Services, ConfigMaps, Secrets, Ingress, namespaces, and persistent storage.
- Developed Bash automation scripts and independently resolved a recurring Ubuntu environment failure that remained unresolved after escalation.

Cyber Security Intern | Estarta Solutions Jul 2024 - Sep 2024

- Performed end-to-end web application penetration testing and bug hunting across authorized real-world environments using manual and automated techniques.
- Used Burp Suite, OWASP ZAP, Nmap, Nessus, SQLMap, Nikto, Metasploit, Wireshark, and Kali Linux for reconnaissance, scanning, traffic analysis, exploitation validation, and request manipulation.
- Produced professional penetration-testing reports with executive summaries, technical evidence, proof-of-concept steps, impact analysis, CVSS-based severity ratings, and remediation recommendations.
- Prepared ISMS policies, risk assessments, security-control documentation, and incident-response material aligned with ISO 27001 concepts.

CCNA Trainee | PSUT x Cisco Aug 2022 - Nov 2022

- Completed instructor-led CCNA training delivered by Cisco-certified trainers and configured/troubleshoot Cisco Packet Tracer topologies using IPv4/IPv6, subnetting, VLANs, trunking, STP, OSPF, and RIP.

SELECTED TECHNICAL PROJECTS

TRIO - AI-Based DOM XSS Detection [GitHub](#) Dec 2024 - Jun 2025

- Developed a functional URL-scanning system that crawls and parses webpage DOM content and combines ML classification with script-based validation to verify suspected DOM XSS findings and reduce false positives.
- Built a Carnegie Mellon University dataset pipeline with cleaning, normalization, a filtered 500-token vocabulary, numerical vectorization, and train/validation/test preparation.
- Trained and compared LightGBM, XGBoost, AdaBoost, Decision Tree, Random Forest, and MLP using class balancing, cross-validation, and hyperparameter tuning; achieved up to 96.19% accuracy and 99.87% precision.

Amanak - Digital Government & Cybercrime Reporting Platform | Solo End-to-End Project [GitHub](#) Jul 2024 - Nov 2024

- Developed a Java Android application, Spring Boot REST API, MySQL database, and administrative dashboard for identity verification, secure registration/login, cybercrime report submission, evidence uploads, and case tracking.
- Built administrative workflows for reviewing reports and evidence, updating case statuses, managing users and bilingual content, viewing operational statistics, and responding to citizen messages.
- Applied Spring Security, BCrypt password hashing, JPA/Hibernate persistence, and Android API integration through Retrofit, Gson, and OkHttp.

EDUCATION & CERTIFICATIONS

Bachelor of Cyber Security | Hashemite University 2021 - 2025

CCNA | Cisco | Aug 2025 - Aug 2028 | Cisco ID: CSC014967361 **CompTIA Security+ | 2023**
